[Bassman Themes](#) have released a new theme for Xoops 2.0X - stardust theme.

This theme is based on a layout designed by the talented designer [Midnite](#) and features an anime-style background.

Some compromises had to be made to fit the Xoops framework into the layout. The right column is alongside the left, and appears even if there are no right blocks selected. Also, any center column module content over 400px wide will scroll sideways to fit. I think it's worth it as the actual design is fairly unique.

More Midnite themes to come from Bassman Themes!
