

CBB 3.04 RC4 is released - Modules

NEWS_PDF_AUTHOR: phppp

NEWS_PDF_DATE: 2006/5/27 4:25:26

CBB 3.04 RC4, the final RC is released.

Notes:

In the release, check for topic ID is added when a post is inserted according to a "weird" problem reported by marco.

Template tuning planned in the release is postponed to next release, perhaps 3.05. By then, new sets of templates are expected along with Xoops 2.015, with which Skalpa will demonstrate real xhtml/semantically correct output for XOOPS.

Known Issues:

MySQL queries for massive data synchronization are still working for MySQL 4.1+ only. We have solutions for 4.1- versions, but with very poor performance, so not released. (See examples below)

Changelog 3.04 RC4

May 27th, 2006

=====

- 1 Bugfix for topic title transfered from post subject
- 2 Added topic check before storing post (reported by marco)
- 3 Removed unnecessary forum option 'allow_attachments'
- 4 Other minor fixes

Example for MySQL 4.1- incompatibility:

```
update error:
UPDATE
xoops_bb_forums
SET
xoops_bb_forums.forum_last_post_id = @last_post =
( SELECT MAX(post_id) AS
last_post FROM xoops_bb_posts WHERE
approved=1 AND forum_id = xoops_bb_forums.forum_id )
WHERE
xoops_bb_forums.forum_last_post_id @last_post
```

It does not make any consequence except inconsistent data are not reconciled, **in case** you have such data
