Universal Whois Query
 Friends, thanks for excellent Xoops software and its Net Query module. Now you can check whois query of all Top level domains like xoops.org, yahoo.co.in, msn.com , msn.ca etc at one place. Its Beta hack. The Good part is I tried to use module rewrite so if who would like to check yahoo.com, try

http://whois.org.in/yahoo.com
similarly
http://whois.org.in/xoops.org
http://whois.org.in/google.co.in
and so on
 If you encounter a bug, please do report. There is no Rocket Science in project, Yet I hope you would find it as useful utility.
Also id some TLD is not supported please do let me know.
Universal Whois Query
Thank for making excellent CMS
