

Betatesters needed - Xoops Multilanguage for 2.0.14 - Modules

NEWS_PDF_AUTHOR: Bender

NEWS_PDF_DATE: 2006/7/4 8:50:00

The [SmartFactory](#) just upgraded **XOOPS Multilanguages package** to support XOOPS 2.0.14.

A download link to the current beta can be found [here](#)

Please note that this a beta version and it is **not to be installed on a production site**. We release it to get your feedback to fix any bugs that may likely occur.

XOOPS 2.0.14 introduced a lot of changes in the code and it is mandatory that our package is tested by as many people as possible.

Please report any problem on our forums.

What's this hack all about ?

XOOPS Multilanguages is a heavily hacked version of XOOPS allowing the implementation of multilingual XOOPS sites.

XOOPS Multilanguages has 2 main fonctionnalités. First, it allows the user to easily change the language of the site. A Select your language block is provided with this package but you can also adapt your site theme (as this site did : look at the top right corner of the site !).

The second fonctionnalité is the Language Tags. This is what will make the content of the site multilingual. It works as any other Xoops Code, ie with brackets [], and in nearly every text area !

When language tags are used, the site will only return the content placed inside the language tags of the selected language.[/size]
