

MetaTags V1 Final released - Modules

NEWS\_PDF\_AUTHOR: chippyash

NEWS\_PDF\_DATE: 2006/7/13 17:32:03

Generate meta keywords in your Xoops site pages header block on the fly dependent on the content of your page. This requires you to hack footer.php and add one line but beyond that everything else is controlled from the administration screen.

Give your Xoop site an added advantage with search engines by generating relevent description and keywords for each page on your site.

Features include blacklisting (including regular expression pattern matching), whitelists, page tracking and page management.

Full user documentation is included in this final release of the V1 product.

Platforms: Xoops 2.0.13, 2.0.14 and 2.2

Support at [Business Systems for Xoops](#)
