

- If you are installing the module without using a previous version, install it as any other Xoops module
 - If you were using a previous version, upload all the files to your site (and overwrite the existing files)
- then update the module from the Xoops modules manager.
- Warning, the database fields were renamed, you must go in the module's administration as least one time to update the database fields.

Forum

[Use this forum to discuss and report bugs about the module](#)

Can I use it on my web site ?

Yes you can !
