A new module : aChat, a chat with AJAX! - Modules

NEWS_PDF_AUTHOR: niluge_kiwi

NEWS_PDF_DATE: 2006/8/6 16:16:49

Hello all!

I just finished a new module : **aChat**! It's a Chat module with AJAX, that's why I called it aChat!
aChat demo here!

I've tested id a long time on Xoops 2.0.13.2 and 2.0.14, and now it's time to you to test it, and to report me bugs, advice to improve it, etc...

The functionalities are explained (in french sorry) on the "lisezmoi.txt" file into the archive.
A summary : Smilies, XoopsCodes, Colors for messages (all parametrable), purge, log files ...

For the AJAX, I used a french Javascript Class : XHRConnection. All the rest is from my laptop keyboard! I hope you like this module and you'll be many to test it!

PS : Sorry for my bad english but I cant do better, especially at 4:20pm 😃

PS 2 : If someone has improves on the english language files for my module, I'm interested!

PS 3 : I come back only in 2 weeks, so don't worry if I don't answer!

(Click on the logo to download it!)
