New W3C Compliant CSS Wireframe Themes for XOOPS 2.0.14 - Themes

NEWS_PDF_AUTHOR: technigrafa

NEWS_PDF_DATE: 2006/8/16 9:30:00

A couple of people have been working on creating CSS-based themes for XOOPS 2.0.14 that are W3C compliant and offer some pretty cool features such as clean printing, hiding notification blocks unless they are "toggled on" , providing font resizing, a dynamic submenu/usermenu and also take advantage of XOOPS 2.0.14's new blocks and ability to overwrite templates for other modules.

There are two themes to note so far - Snow77's CSS100 theme which is "fluid" or adjusts to the width of your browser and also Technigrafa's "fixed" theme, which is based off of the famous Ruthsarian "Skidoo Too" example.

This is a collaborated effort to provide XOOPS developers "wireframe" themes to build from that are standards compliant and DON'T USE TABLES FOR LAYOUT PURPOSES! 😃

These themes are pretty near completion but could use some more testing, so if you're running 2.0.14, plug these guys in and let us know what you think!

Also, if you have some good CSS themes laying around that are W3C commpliant, post yours as well as a resource for other developers.
