

xoopscomments CrystalHack - Hacks

NEWS_PDF_AUTHOR: Defkon1

NEWS_PDF_DATE: 2006/9/11 21:20:00

CrystalHack is a xoops comments system hack that implements the SecurityImage class by Dugris and a useful new "Username" form field.

With this new field even anonymous users can specify a nickname instead of "Anonymous".

I think that this hack will be very useful especially in blogs and it will allow the webmasters to open Comment functionality to anonymous users without worrying about spammer.

Hope you'll like it...

[Download](#)

I succesfully tested it on xoops 2.0.13.2 and 2.0.14.

Alternative link to dev.xoops.org projectpage:
