Happy Linux Module Updates: Web Links 1.13, What's New 2.12, RSS Center 0.40, Happy Linux Module 0.20, RSS Headline 1.11

Ken Ohwada, webmaster of Happy Linux, has asked me to let XOOPSers know that there have been some major updates to the modules available at his site.

Weblinks 1.13 Beta Is a highly-versatile Link module. It can be used as a links directory, address book, Business Directory and more. The module can be set so that if a submitter does not necessarily have to have a web site to submit a listing.

The module produces RSS, RDF and ATOM feeds and can also read RSS, RDF and ATOM feeds from submitted sites.

This module is cloneable.

What's New 2.12 This module collects the latest updates from your XOOPS modules. Results can be displayed in a block or on the module's index.php

RSS Center 0.40 A powerful XOOPS-based RSS Reader. This module collects RDF/RSS/ATOM feeds from the registered sites, and stores in a database. This module searchs feeds in database, and carries out the search results in RDF/RSS/ATOM form.

This module is cloneable.

Happy Linux Module 0.20 The basic framework for using modules from Happy Linux. **You MUST install this as a regular module in order for other module's from Happy Linux to work.**

RSSC Headline 1.11 This module has the same basic features as the XoopsHeadline module.

DEMOS OF THE MODULES ARE AVAILABLE AT HAPPY LINUX

All files can be downloaded from the Happy Linux download page and are also available at the XOOPS Development site. Questions, comments & suggestions can be posted on the Happy Linux Support Forum
