

XOOPS authentication system documentation is out ! - XOOPS

NEWS\_PDF\_AUTHOR: pemem

NEWS\_PDF\_DATE: 2006/10/8 15:00:00

Since 2.0.14, XOOPS has a new authentication system. It allows to delegate authentication to directory server like **OpenLDAP**, **Microsoft Active Directory**, **Novell e-directory**, **Fedora Directory serveur**, etc, ....

XOOPS also makes it possible to fill automatically XOOPS database from the directory server (provisionning)

It was time to publish a sufficiently detailed documentation for XOOPS configuration especially in professional environment.

You can find this documentation [here](#)

This documentation will be published soon on the official [XOOPS docs website](#)

We thank those which use XOOPS for an Intranet/extranet to make us experience feedbacks of their use in order to contribute to the development of XOOPS in the professional sphere.
