

IpCamera Module released - Modules

NEWS\_PDF\_AUTHOR: bcartolo

NEWS\_PDF\_DATE: 2006/10/27 18:59:12

I'm proud to announce that IpCamera is ready to be used.

IpCamera allows your users or guests to watch in real-time an Ip camera or called webcam if you want to. It suits any kind of internet connection.

The difference with all the others scripts going round the web is the way it works.

The images will be refreshed based in the speed of the user's connection. No more refreshing time.

[Download from dev.xoops.org](https://dev.xoops.org) ,

[Demolink](#)

[size=x-small](note: only up part time - not allways)[/size]

Note: The demo page is in Spanish but the module is available in English and Spanish. You can contact me to add others translation or to comment it at contact at fernandocosso dot com dot ar
