

Photo & Profiles Hack for Xoops 2.0.x - Hacks

NEWS_PDF_AUTHOR: m0nty

NEWS_PDF_DATE: 2006/11/6 15:40:16

Although this may dissappoint many users, I have to inform you that as from November 2006, I will no longer continue to maintain the Photo & profiles hacks for XOOPS.

I will endeavour to try & support existing installations of it, and will continue to offer it for download.

But I will not be making anymore updates to the hack, including core updates when the next versions of XOOPS are released.

My reasoning for discontinuing this hack is mainly due to lack of time and the fact that there are now better options available.

I highly recommend the use of Formulize 2.2 module along with the registration codes hack, created by Freeformsolutions.ca, with both these installed you can easily customise your profile pages whenever you require + a whole lot more..

you can find both modules at dev.xoops.org

A Big thankyou to everyone who has found a use for my hack, I'm pretty sure I will come up with some more great hacks in the future that people will find useful.
