XOOPS EXM 2.0.16 is available to download at our [downloads section](#)(registration required). XOOPS EXM is only a graphical modification of the XOOPS administration section that enhances the interface visually for a nicer look and simpler usage.

The installation and configuration and/or updating is exactly the same as the official XOOPS version. In the same way has the same functionality and support for modules and themes which means it is 100% compatible with XOOPS 2.0.16 so don't be afraid for that reason.
