Hi,
I've finally released first beta release of LDAP support. You can download it with same link:
http://www.kasapoglu.org/modules/mydownloads/visit.php?lid=1

I've decided to create new thread, because I want to seperate alpha discussions and beta discussions.

Onokazu, again it didn't work, but I found a workaraound. I know it makes a security hole, we should fix it later.

I put most ldap codes on ldap.php file. We need to discuss about security, code optimisitation things.
