

Frameworks 1.01 is released - Hacks

NEWS_PDF_AUTHOR: phppp

NEWS_PDF_DATE: 2006/11/30 18:10:00

Frameworks provides a collective of common functions, classes, service packages like fpdf, transfer that are required or can be used by modules like article, cbb, planet, wordpress, mediawiki and more

Major updates in the release:

- 1 site-wide wiki syntax, requested by sandmann
- 2 auto detection of flash dimension, requested by Rickb

Download and details: [Frameworks for article, cbb, planet and more](#)

user guide:

1 check the files xoops_version.php under /Frameworks/ and subfolder to make sure it is newer than your current ones

2 (check your XOOPS version, if you are using XOOPS 2.2*, REMOVE /Frameworks/xoops22/) -- deprecated, just leave as it is

3 upload /Frameworks/ to your XOOPS root path:

XOOPS/Frameworks/art
XOOPS/Frameworks/fpdf
XOOPS/Frameworks/PEAR
XOOPS/Frameworks/textsanitizer
XOOPS/Frameworks/transfer
XOOPS/Frameworks/xoops22

4 configure preferences where applicable

4.1 ./fpdf/language/: make your local language file based on english.php, you could check chinese.php as example, or inline comments in english.php

4.2 ./textsanitizer/config.php: check inline comments

4.3 ./transfer/:

4.3.1 ./transfer/language/: make your local language file based on english.php

4.3.2 ./transfer/modules/: for developers only, add transfer handler for your module, or store the file as: XOOPS/modules/mymodule/include/plugin.transfer.php

4.3.3 ./transfer/plugin/: add items available for the transfer

4.3.4 ./transfer/plugin/myplugin/config: configurations for a plugin

4.3.5 ./transfer/plugin/myplugin/language/: make your local language file based on english.php

4.3.6 ./transfer/bar.transfer.php: set "\$limit" for number of plugins that will be displayed on a

front page;

4.4 ./xoops22/language/: make your local language files based on /english/

5 check file names: for filename case sensitive system, make sure you have the file names literally correct, i.e., "Frameworks" is not identical to "frameworks"
