

SDoo clan goes Xoops - YAXS

NEWS_PDF_AUTHOR: incama

NEWS_PDF_DATE: 2006/12/4 17:10:15

I'm very proud to announce the new website for the SDoo CounterStrike Source clan.

The SDoo is a international game clan that first saw the light begin 2006. Whilst initially the site was based on E107 cms, we soon came across some limitations. And although the E107 support is great, I just missed my 'own' beloved Xoops. With the help of some key module and former core developers I have managed to create a full featured Clan site build with Xoops.

The site is build with the following modules:

- Team module by xoops.web-udvikling.dk
- CSSquery module by xoops.web-udvikling.dk. Custom made by Mithrandir!!
- Newbbex module by herve-thouzard.com
- News module by herve-thouzard.com
- ExtGallery by Zoulou.net

Further:

- The webdesign is done by core74.org
- Duck logo by David Wallace

And although not all data is converted into Xoops, there already is alot to see, so come and pay us a visit at SDoo-clan.com.
