

Do you like fun things ? - Modules

NEWS_PDF_AUTHOR: hervet

NEWS_PDF_DATE: 2006/12/16 17:06:17

While I was studying the [Dojo javascript toolkit](#), I saw this effect that Mac users used to see. On Dojo, this effect is called *Fisheye* :

Quote:

A menu that balloons out, similar to the launcher on OS X

Applied to the Xoops News module, here is the result (click on the picture for a larger version) :

I like this effect a lot so I decided to apply it in the administration of the [News module](#). So I decided to create a test version of the News module with this kind of effect. For this moment it is not at all the definitive version (and it's not really optimized) of the News module, that's just an exercise.

If you really don't like this kind of menu, you have the choice, you re upload the normal version of the News module or you edit the file called config.php (at the module's root) and you change this line, from :

```
$cfg['use_fun_menu'] = true;
```

to :

```
$cfg['use_fun_menu'] = false;
```

If you want to see the result of this exercise, just [download the module](#), unzip its content, copy it to your site and update the module.

It has been tested with Opera, Mozilla Thunderbird and Internet Explorer 7

We are waiting for your feedback and if we see that you like it, we will add such features in our new versions of our modules.

bye,
Instant Zero
