

Release 2.12 of XoopsInfo - Modules

NEWS\_PDF\_AUTHOR: kris\_fr

NEWS\_PDF\_DATE: 2007/1/7 13:16:07

## Release 2.12 of XoopsInfo

Following your remarks and some of your suggestions, Dugris once again improved the XoopsInfo module one month after the release of its revolutionist version 2.11.

This version 2.12 is downloadable [HERE](#).

**Caution :** For those who want to keep the classical mimetype's manager, don't upload /class, /kernel and /language directory/files from the module's archive

It thus brings us once again his batch of innovations, we can quote:

- New section “Infos system” (<http://phpsysinfo.sourceforge.net/>)

- Rehandling of the part “Sql Environment”

- Rehandling of the access “rescue”
- Rehandling of xoopsinfo.php
- New parameters in the displayindex.php module:

**Caution :** For those who want to keep the classical mimetype's manager, don't upload /class, /kernel and /language directory/files from the module's archive

[Download the module in version 2.12](#)

Thank you for your information feedbacks on this module, knowing that certain functionalities will be doubtless integrated in version 2.4 of Xoops.
