NEWS\_PDF\_DATE: 2007/2/7 11:30:00

[INSTANT-ZERO](#), a specialist of eSolutions based on Open Source technologies, is happy to announce the launch of our last creation : [GB Photosports](#).

This eCommerce website, available in french and in english is a site of sportives photos.

[We have created this site](#) for a photographer, Gilles Bouvier, professional photographer specialized in sportive events in relation with cars.

With the site, our client can :

- post his photos to sell them directly (via Paypal)
- to have informations about his customers, their details for example
- to communicate on his notebook etc

The modules used are Smartlangage, Smartsection, Sitemap, Extcal, Smartsection, Liaise, Mylinks, Multimenu and Marquee,

**For the eCommerce solution, we made a custom development so that the client could display and promote the sell of his photos.**

The module, wich is part of our eCommerce solutions for Xoops, can display an unlimited amount of photos while staying as simple as possible :

- You just have to drop (via FTP) your photos in a folder to see them online.  
No need to use a database import or to submit the photos one by one.
- The module can organize the photos per category (sportive events) by using the folder's hierarchy
- The module has a specific search (search by car's number)
- You can use a caddy
- You can pay via Paypal
- And you can manage the shipping amounts and discounts

We hope that you will like the site.
