

vulnerability in SPAW editor - Security

NEWS_PDF_AUTHOR: phppp

NEWS_PDF_DATE: 2007/6/13 4:05:22

Vulnerability was reported in some version of the SPAW editor, which is used by some of XOOPS third-party modules.

Module "tinycontent" is one of the modules using SPAW. Although we are not sure which version(s) is vulnerable, we suggest disable SPAW in tinycontent and remove the "modules/tinycontent/admin/spaw/" folder from your server.
