

EFQ Directory module - version 1.0 RC released - Modules

NEWS_PDF_AUTHOR: wtravel

NEWS_PDF_DATE: 2007/7/2 14:06:17

I am happy to announce the Release Candidate (RC) of version 1.0 of the EFQ directory module. EFQ directory is a module that allows webmasters to manage yellow pages like directories within their XOOPS installations. Because it uses customizable data fields, the administrator can set up custom made directories and categories.

I hope this module will be appreciated and that with your help this module can become of better value to you. The first focus will be on solving bugs and issues though.
