## Web Show v.57 Media Player - Modules

Posted by: tcnet

Posted on: : 2007/7/8 13:27:54

The WebShow module for the XOOPS content management system combines a MyLinks directory with Jeroen Wijering's Media Player 3.9 to catalog and play Flash media files, directories and webfeeds. WebShow is also a web feed generator that will read and filter a media directory, generate an XSPF playlist and publish a web feed link button for syndication.

Webmasters can use WebShow as a presentation module to display copyright approved audio (mp3), videos (flv), animations (swf) and image (jpg, gif, png) slide shows with music.

New Features in WebShow v.57 beta  
Jeroen Wijering's JW Media Player 3.39  
Poster View displays all posts by user.  
Information box with contents selected per entry.  
Download link for single media files.  
Embed code box displays for internal media files.
