My first xoops module hack: added the option to set an expiry date to news posts to the Xoops news module.

There are still some small bugs (this IS my first hack, after all 😊), but you can test it [here](#) (use the news admin). You can find the modified news module [here](#), but you need to manually add a db field in your prefix_stories table (int(10),NOT NULL, default value 0) for it to work properly.
