

Release of DokuWiki 2.10 for Xoops - Modules

NEWS\_PDF\_AUTHOR: jayjay

NEWS\_PDF\_DATE: 2007/8/20 20:48:42

I have embedded the latest stable dokuwiki release 2007-06-26 into xoops. This new module is based upon the great work of D.J. on 'dokuwiki for xoops' versions 2.01 and 2.02.

[Forum on Xoopsforge for bugfixes](#)

## Improvements

1. this is an upgrade from dokuwiki version 2006-03-09 to 2007-06-26. Since that time the entire dokuwiki structure has changed enormously. I'm thinking of bugfixes, security updates, but also functionality improvements mainly in the way dokuwiki treats plugins (division between admin/helper/action/syntax/renderer plugins). A changelog can be found [here](#)
2. being the latest stable dokuwiki release, xoops users can now use almost [all recent dokuwiki plugins](#)
3. these additional plugins are in the xoops module: box, discussion, feed, include, indexmenu, linebreak, note, pagelist, pagemove and tag. [More info](#)
4. I have added a xoops\_pagetitle hack to make the wiki more attractive to search engines
5. I have fixed a small 2.02 bug thanks to user peekay on xoops.org. [The bug prevented viewing images as an anonymous site visitor](#)

## Questions

### Can I add discussion to the wiki ?

Discussion is now a dokuwiki plugin. You can enable site-wide discussion in lib/plugins/discussion/conf/default.php or you can add per-page discussion manually like this:  
~~DISCUSSION~~ [More info](#)

### Where is the spellchecker ?

Spell checking has greatly improved in the latest dokuwiki release. You can follow [these guidelines](#) to activate.

### I can't see the quickbuttons in the editor ?

This could be due to a javascript error. Please delete all files in xoops\_root/cache/ and

xoops\_root/templates\_c and make sure xoops debug is disabled (as it should be on production sites)!

## Upgrading

It shouldn't be too difficult to upgrade to dokuwiki 2.10. Users that upgrade should just ignore the 'uploads' folder in the zip-archive. Before uploading the 'dokuwiki' folder in 'modules', they have to change two lines in conf/local.php: `$conf['metadir'] = $conf['savedir'].'/meta/'; //edit jayjay: avoid clutter!` becomes `$conf['metadir'] = $conf['savedir'];` and `$conf['lockdir'] = $conf['savedir'].'/locks/'; //edit jayjay: avoid clutter!` becomes `$conf['lockdir'] = $conf['savedir'];`

People that used the old 'discussion' hack in 'dokuwiki for xoops 2.02' should be able to convert it to [the new discussion plugin](#)

Kind regards,

jayjay
