

Host Billing goes XOOPS - YAXS

NEWS_PDF_AUTHOR: samer

NEWS_PDF_DATE: 2007/9/1 11:58:11

Solid State is an open source alternative to commercial billing software designed for webhosts. It was designed to help web hosts manage their customers, plans, accounts, invoices...

Recently, the developer has shown a lack of interest in continuing the project. A new group has taken over the project and it is now moving forward.

The website was ported from postnuke to XOOPS. All registered users and forum posts were imported, the bug tracker was moved too (xproject).

Currently, we are using a default theme from XOOPS design, but we are looking for a new design.
