

Web Show v.61_Beta Released - Modules

NEWS_PDF_AUTHOR: tcnet

NEWS_PDF_DATE: 2007/9/12 9:10:47

The [WebShow Module](#) wraps Jeroen Wijering's Media Player into XOOPS to catalog, syndicate and play Flash media files, directories and webfeeds.

New Features in WebShow v.61 beta

- Selectable WYSIWYG Text Editors

- Captcha confirmation on forms

- Tags

- New Playcat and playposter views display the player and media list.

- Added javascript embed code and revised object embed.

- You Tube Quick Submit Form

- Revised templates for Firefox browser.

Notes:

WebShow v.61 requires additional XOOPS files. Please download and install Frameworks, class/xoopseditors and TAG module by phppp from dev.xoops.org.

The module version number was advanced into the sixties to mark the point where additional xoops files were required.

WebShow uses [Jeroen Wijering's Media Player 3.11](#). The JW Media Player is under a Non-Profit Share-A-Like Creative Commons License . Commercial users will need to buy a commercial license from Jeroen.

Support:

Previous support for this module has taken place on three different sites, PM, IM and email. In order to save time and consolidate information I have opened a web site at <http://wikiwebshow.com> to support this module. From now on, please direct your comments, questions and feature requests to the [WebShow Admin Forum](#) for a prompt reply.
