[xoEmail](#): Converts email for a simple protection against spambots.

With this plugin you can modify the address email with value of replacements which you will have configured.

Quote:

duchemin@free.fr => duchemin [your value] free [your value] fr  
[duchemin@free.fr](mailto:duchemin@free.fr) => duchemin [AT] free [DOT] fr

You can also add new value of replacements which will enable you to transform for example the .fr into [your value].

Quote:

[duchemin@free.fr](mailto:duchemin@free.fr) => duchemin [AT] free [FRANCE]

[xoEmailImage](#) : Converts email into captcha image for a simple protection against spambots.

This plugin uses the GD library, if this one is not installed, it's the plugin smarty [xoEmail](#) which will take over.

You can configure the creation of the image by modifying the values of the file of configuration.
