

XOOPS 2.0.17.1 RC2 released - XOOPS

NEWS_PDF_AUTHOR: phppp

NEWS_PDF_DATE: 2007/10/1 6:43:18

The XOOPS development team is pleased to announce the release of XOOPS 2.0.17.1 RC2.

This is merely a bugfix release. Some main changes include:

- Bugfix for login problems with some IE browsers caused by session_regenerate_id on some PHP versions;
- Improvement on uploader mimetype check

Read the full changelog for details.

System requirements ----- PHP Any PHP version ≥ 4.3 (PHP 4.2.x may work but is not officially supported) MySQL MySQL server 3.23+ Web server Any server supporting the required PHP version (Apache highly recommended) Downloading XOOPS

----- Your can get this release package from the sourceforge.net file repository. Both .zip and .gz archives are provided. Installing XOOPS -----

1. Copy the content of the htdocs/ folder where it can be accessed by your server 2. Ensure mainfile.php, cache, templates_c and uploads are writable by the webserver 3. Access the folder where you installed the htdocs/ files using your web browser to launch the installation wizard Upgrading from a previous version ----- Upgrading from XOOPS

2.0.17 (easy way) 1. Get the update package from the sourceforge file repository 2. Overwrite your existing files with the new ones Upgrading from XOOPS 2.0.14/2.0.15/2.0.16/2.0.17 (using the full package) 1. Move the "upgrade" folder inside the "htdocs" folder (it's been kept out as it's not needed for full installs) 2. Delete htdocs/mainfile.php, htdocs/install/, htdocs/cache/, htdocs/extras/, htdocs/template_c/, htdocs/themes/ and htdocs/uploads/ 3. Upload the content of the htdocs folder over your existing files 4. Access /upgrade/ with a browser, and follow the instructions 5. Follow the instructions to update your database 6. Delete the upgrade folder

Upgrading from any XOOPS ranging from 2.0.7 to 2.0.13.2 (using the full package): 1. Move the "upgrade" folder inside the "htdocs" folder (it's been kept out as it's not needed for full installs) 2. Delete htdocs/mainfile.php, htdocs/install/, htdocs/cache/, htdocs/template_c/, htdocs/themes/ and htdocs/uploads/ 3. Upload the content of the htdocs folder over your existing files 4. Delete the following folders and files from your server (they belong to an old version): *

class/smarty/core * class/smarty/plugins/resource.db.php 5. Empty the templates_c folder (except index.html) 6. Ensure the server can write to mainfile.php 7. Access /upgrade/ with a browser, and follow the instructions 8. Write-protect mainfile.php again 9. Delete the upgrade folder 10. Update the "system" module from the modules administration interface Files integrity check ----- The full XOOPS package is released with a script able to

check if all the system files were correctly uploaded to the server. To use it, follow these instructions: 1. Upload the xoops_md5.php and xoops.md5 files located in the XOOPS package

root to your XOOPS server folder (putting them next to mainfile.php). 2. Execute xoops_md5.php with your browser 3. If necessary, re-upload the missing or corrupted system files 4. Remove xoops_md5.php and xoops.md5 from your server

Revealing the blank page backtrace log ----- XOOPS displays a basic error page when a fatal error preventing it to run is encountered. To help you diagnose the cause of the error, this page contains additional messages that are hidden by default. To reveal them, use your browser "select all" function (for most browsers, you can use "Ctrl+A").

Incompatibility with some modules ----- Beginning with XOOPS 2.0.14, a change in the core template methods resulted in some incompatibilities with some modules that do not have their templates under (dirname)/templates/ as many XOOPS modules do. Please read extras/readme.txt for workaround instructions.

Modules ----- The packages do not contain any module apart from the system one. You are invited to browse the XOOPS modules repository to get some. Note: as a new repository is being built, the current repository is not up-to-date, PLEASE VISIT DEVELOPERS' WEBSITES TO MAKE SURE YOU ARE USING PROPER VERSION OF MODULES. We also highly recommend the installation of the Protector module which will bring additional protection and logging capabilities to your site.

The XOOPS development team is pleased to announce the release of XOOPS 2.0.17.1 RC2.

This is merely a bugfix release. Some main changes include:
