Mylinks version 1.10, the standard Xoops weblinks module wasn't working on my site anymore after upgrade to php5. With help from Shine I made it work again by changing some code.

Maybe other people use this simple but still good working weblinks module aswell so I decided to release it here as version 1.11

This module is as is and not developed by me, all credits for that go to the original designer. I just made it php5 compatible

Have fun

Download mylinks 1.11
