## Emergency in the past two days

On October 6th, the xoops.org server was hijacked and all <http://www.xoops.org> administrator accounts permissions were removed and an account "JMorris" was presented as the only administrator account. The XOOPS Project Council also noticed other management permission changes.

The Council restored webmaster account permissions immediately and sent an official email to the email address associated with "JMorris". Message replied from the "JMorris" account's email confirmed that the permission changes were made by him. Soon after email exchanges, the permissions on <http://www.xoops.org> were changed again and xoops.org server root account password was changed as well.

The XOOPS Foundation, who is holding XOOPS Project's servers, was contacted several times from the very beginning since October 6th. Meanwhile, the XOOPS Project Council halted all its actions on <http://www.xoops.org> to wait for XOOPS Foundation's response.

By October 8th Herko, the current Foundation Chairman contacted phppp, saying that "JMorris" had given back <http://www.xoops.org> administrator accounts.

The XOOPS Project Council appreciates the Foundation's assistance with this issue. Meanwhile, the Project Council looks forward to valid thorough solutions from the Foundation to protect XOOPS Project's servers.
