Recently in [This](#) post, we discovered a technique that will be beneficial to all themes.

The gist of it is that, until now, themes have displayed the regardless of whether or not there was content to be displayed.

The standard default theme, and every theme since has looked like this.

Which left a rather sizable gap on your index if you did not have a module set as your start page.

if you replace that code with the following, will only be displayed if and only if there is content to be displayed.

Thanks to JAVesey for initiating this find.
