For those who don't know CM4F, it stands for Community Messaging for Forums. It is a tool that has been developed to integrate mailinglists/yahogroups, and generally speaking all community tools that can use email communications with forums.

The tool has been initially defined for the phpBB forum system, but has been expanded to SMF, NewBB, and other systems.

Due to a huge lack of time, the development has been lagging for some while, but now is being retaken.

CM4F for the NewBB forum system will be moving to the <http://www.open-networks.org> site, where it has been already integrating some messages in the past.
