[F5Registry](#) is an auto registry website using a custom module that I wrote.

The autoregistry module has the following features:

- * Setup for one make.
- * Multiple models and model years.
- * Hosted photo images.
- * Linked from user to auto or autos.
- * Notifications to track new autos.
- * Most popular auto.
- * Automobiles by country or state.

I plan to release the module to XOOPS once it's packaged and documented properly.
