

Services à la maison : eCommerce of Service Deliveries made by Instant Zero - YAXS

NEWS\_PDF\_AUTHOR: instantzero

NEWS\_PDF\_DATE: 2008/1/22 16:18:24

[Instant Zero](#), your specialist of Internet Solutions based on Open Source technologies, is happy to announce the opening of a new website [SERVICES A LA MAISON](#).

The personal services are a growing industry and our client (based in Paris) wanted to have a presence on the Internet:

- presence by setting up a "classical" showcase site
- a little stronger presence through the sale of services, directly from the site.

[The site](#) makes it possible to introduce the company, its services, tariffs, its commitments, its functioning, but [it also allows to book a service](#) for a specific date and time given by choosing someone from the list of employee(e)s.

For that purpose, we developed the « **myServices** » module.

- The module takes into account the store closing days (normal or exceptional), vacations, availability of the choosen person, and the minimum delay between 2 deliveries (all the rules can be set through the admin).
- **The developed calculation engine intensively uses AJAX** to check, **on real time**, the availabilities of an employee for the service delivery.
- Employees can be notified by email as their services are booked by customers(as soon as the online payment has been verified)
- About **online payment**, the system makes use of Paypal Gateway to have the best value for money rate
- A real time payment notification feature has been implemented in this module, that permits the website team to be notified on real time about payments status.

- Our customer can manage his employee absences, he can also export his customer database with all orders to analyse his activity on Excel or OpenOffice (for example).
- Module's Admin Panel permits among other to show our customer the status of reservation based on latest orders.
- This module is able to use **url rewriting** to show significative URLs to search engines/crawlers, and meta informations (meta keywords and meta descriptions) are generated on the fly from pages contents.
- This module was **entirely** developed with PHP5 features and works with Mysql 5.
- Because of the **intensive use of AJAX** to check availability of the professionals, the module benefits from **an automatic cache management of SQL Queries**. This permit to quite not make use of SQL Queries. Performances gains are huge.

[This website](#) makes use of other modules like Multimenu, Liaise, Sitemap, Pages, FAQ, XoopsCare, Newbbex, and a guestbook and partner manager.

We hope you will enjoy this website and find it usefull, despite it's in french !.
