To use Tinyeditor for creating custom blocks in 2.3 :

Go to root/module/system/admin/blocksadmin/

Make an backup of the blockform.php
and open it.

Then

Search for:

```
$textarea = new XoopsFormDhtmlTextArea(_AM_CONTENT, 'bcontent', $block[  
'content'], 15, 70);
```

And replace it with:

```
if ( is_readable(XOOPS_ROOT_PATH .  
"/class/xoopseditor/tinyeditor/formtinyeditortextarea.php")) {  
    include_once(XOOPS_ROOT_PATH .  
"/class/xoopseditor/tinyeditor/formtinyeditortextarea.php");  
    $textarea = new XoopsFormTinyeditorTextArea(array('caption'=>  
_AM_CONTENT, 'name'=>'bcontent', 'value'=>$block['content'], 'width'=>'100%', 'height'=>  
'400px', 'xEditor'=>'1'));  
}else{  
    $textarea = new XoopsFormDhtmlTextArea(_AM_CONTENT, 'bcontent', $block[  
'content'], 15, 70);  
}
```

And if you go to blocks in your administration then you'll see tinyeditor in stead of the normal editor.

(This hack only works if you have installed tinyeditor!)
