Hi all

i have written a function to build random pictures blocks (from myalbum-p).

You need to include this into your: root/include/functions.php:

```
***** hack by www.stefanosilvestrini.com *****/
function getPicGallery($myalbumNum, $cid, $random) {
    global $xoopsConfig;
    $db =& Database::getInstance();
    $myalbumNum = trim($myalbumNum);
    if($random != 1) $sql =
"SELECT s.lid AS lid, s.ext AS ext FROM ".$db->prefix('myalbum'.
$myalbumNum.'_photos')." s, ".$db->prefix('myalbum'.'$myalbumNum.'_cat').
" t WHERE s.cid = t.cid AND s.cid = ".$cid." ORDER BY s.lid DESC LIMIT 1";
    else $sql =
"SELECT s.lid AS lid, s.ext AS ext FROM ".$db->prefix('myalbum'.
$myalbumNum.'_photos')." s, ".$db->prefix('myalbum'.'$myalbumNum.'_cat').
" t WHERE s.cid = t.cid AND s.cid = ".$cid." ORDER BY RAND() LIMIT 1";
    $result = $db->query($sql);
    $myrow = $db->fetchArray($result);
    $object =    ""
        ."
        .
        .
        .
        .
    ";
    return $object;
}
```

and then you can add a custom PHP block with this code:

```
echo getPicGallery('X', 'Y', 'Z');
```

WHERE:

- X: myalbum Number
- Y: cid number
- Z: 1 = random pic ; 0 = last inserted pic

eg:

```
echo getPicGallery(",'1','1');
```

will display random pics from myalbum and cid = 1

Discussion into forum:
