What is mytabs Module (v1.0) ?
======================

With this Xoops module, your can create blocks with several tabs an blocks inside.

The module can :
. Create any blocks you want (just clone the original)
. Create any pages (holders for tabs) you want so you can choose in the block what page to show
. Create any tabs you want per page
. Create any blocks you want per tabs
. Set group view permissons per block/page, tab and block
. Set time based tabs and blocks (auto-expiring)
. Choose from 5 diferent page/block layouts
. Use how many blocks you want in the same page or not (just clone and set them)
. Many other goodies like cache, position, scroll, width, etc

Demo here:
http://www.xuups.com

Download here:
http://code.google.com/p/xuups/downloads/list

Requirements
===================

Same as your xoops instalation

If you have problems using xoops 2.3 alpha then add a folder named 'smarty_cache' with write permissions in
your_root/xoopsdata/caches/xoops_cache

This was tested with php5 and php4.

Tips
==================

You can create your own .css for tabs. Just upload it to css folder and it will be available for selection in your blocks!

Ps: Special thanks for Gopala, Mowaffak, Gibaphp and you!
