

Turkish Rock Music Singer's (Haluk Levent) using XOOPS - YAXS

NEWS_PDF_AUTHOR: acikdeli

NEWS_PDF_DATE: 2008/7/27 16:10:00

Halukweb, which is the official site of Turkish rocker Haluk Levent, has been developed with XOOPS 4 years ago.

XOOPS is very flexible, and as a result Halukweb contains many special parts. Some of them are listed below.

[Visit HalukWEB.com](#)

Members Area

SmartProfile module exists in the basis of user system, and it is used for registration. And other user panels supported by Ajax are specified for Halukweb users. All users configurations are arranged on user page which is prepared with supported ui. This page is also supported by Ajax. Telephone information is gathered from user like E-mail, password, city and so on. Thus users are informed via sms when a new group activity is planned on their city. New panels on user panel area.

Rahat Ver (Let Me Alone)

This tab is the feature of "HalukWeb Mesajc?s?" module which is prepared by taking the BuddyFriends module,also you can not see the messages from the blocked users.

Görseller (Images)

This system which is developed onto the yogurt module's first beta, provides user to create their own gallery. Also users can make one of those pictures as profile picture. For this demonstration LightWindow is used

Last Fm

This tab is used for integration of HalukWeb and <http://www.last.fm> . Any user can broadcast their last fm widget by making its necessary settings.

Görüntüler (Videos)

This tab also contains an area which makes users broadcast their youtube videos,it carries

similarities like Görüntüler system

Another feature of "HalukWeb Mesajlar (HalukWEB Messenger)" is friends. "Arkadaşlar" resembles the friendship system on "BuddyFriends" But "add friend", "remove friend" was created by Ajax, and every friend of user can be seen on his/her own profile.

Forum

Specified version of CBB 3.08 forum is used in HalukWEB

Puanlama (Karma)

It is used instead of karma system but is different from classic system. As it uses ajax basement, + and – points directly work. All total points can be seen on user profile.

Bildir (Report)

It is used instead of report system but different from classic report system. While users are reporting unwanted messages or topics, they can select which rule has been violated. When this action is applied with ajax, user can still surf and this problem is controlled by online authorized admins or moderators. If any problem is seen, a private message is sent to owner message explaining the problem of the message, and the point that the user get is deleted and it gives –1 point to his account. If the user gets -5 points during the next 30 days, he/she becomes automatically kite for a week. Kite user's messages can not be published immediately, and it is controlled by admins and then are published.

It is so easy for user to send report to admins with clicking the posts or messages. Kite users can write after 7 days. All those actions proceed above is done by name the system of **Aibo** automatically

New Web 2.0 Style Forum Block

According to this system, the last posted 20 topics are displayed in a special font according to posts they are replied the most along the 24 hours

Used Modules

Private Halukweb.com Modules

Fmkp (special Area For Moderators)

Tkp (special Area for Agents)

HalukLevent (Area For Haluk Levent)

HalukWEB (User Area)

HalukWEB Mesajlar (Developed BuddyFriends)

Sohbet (Chat Module)

UyeGorsel (Module For Users To Show Their Videos On Their Profile)

UyeGoruntu (Module For Users To Show Their Images On Their Profile)
