

CVD Announces Video Tube v1.6 Release - Modules

NEWS_PDF_AUTHOR: tank1955

NEWS_PDF_DATE: 2008/7/31 5:50:00

Video Tube v1.6 has been released and is now available for download. The release has been tested with both XOOPS 2.0.16 and XOOPS 2.2.6. This release introduces categories for video management, play video blocks, enhanced search with two different result display formats and total results with results pagination. The embedded player now offers a colored border option. Several data items acquired from YouTube have been added to the display under the embedded player along with a Display More Info / Display Less Info combination button. A parameter has been added to each YouTube search query so search results no longer contain any videos in which embedding has been disabled by the author. The Video Help page has been updated to reflect the new appearance of the submission page. What's New page has been added that describes the new features found in this release.

This release covers approx 50% of the feature requests we have received. We wish to thank everyone for their feedback and we hope you find the software as enjoyable to use as we did in developing it. We are currently putting together the planned features for release v1.7 and the list can be viewed at <http://www.customvirtualdesigns.com>
