X-Center 1.09 - Modules

NEWS_PDF_AUTHOR: wishcraft

NEWS_PDF_DATE: 2008/9/30 0:10:00

As phppp has asked me to explore some of the older modules as a core developer, I have re-written the Content module so it falls in line with code standardisation as well as XOOPS Code protocol. It has been completely rewritten as well as a concession of other features added in. Now with the content module this has been renamed to X-Center as it is the center of your website. There is a new XML Power Block which will allow you to write and clone multiple blocks that scan other areas of your database for content in pertenance to the data in the article.

This means that you can have blocks in multiple places that are constantly changing based on various content types in the system, this off course with Search Engines the more you site expands and is used, mean you have a higher SEO rank cause your pages are reflecting a higher change in the system page impressions.

The X-Center is and will remain quiet popular as I have had many enquires about the content module so I have revamped it and released it to you.

If you would like more information on the XML Document standard for this module please refer to the wiki
