

Video Tube Feature Requests Now Open - Modules

NEWS_PDF_AUTHOR: tank1955

NEWS_PDF_DATE: 2008/10/1 0:30:00

Now that we have went to production with Video Tube v1.8 CVD is looking over feature requests for the next release.

With the number of non-english sites that are employing Video Tube we definitely need to provide full language support

Clean up the current language files to eliminate many terms that are duplicated, making translation easier

Add video flagging so visitors can report inappropriate or unavailable videos

Move several of the functions to classes simplifying code and making the addition of future enhancements easier

Clean up any text variables that are hard-coded moving them into language files

Add notifications

Add nested subcategories

Other possibilities we are looking into are:

Addition of more services with the search, preview and auto-fill features

Automated admin function for identifying videos that are no longer available due to expiration or the author disabling the permission to embed the video after the initial post

Blocks that allow you to spotlight videos by a particular submitter to promote visitor submissions

Admin function for making multiple submissions simultaneously so you can create large amounts of video content in just a few easy steps

An automated script for porting your YouTube video info from X-Movie tables into Video Tube

I don't know if it will be possible but I am looking at trying to create a cross-module function so you can use the YouTube search, preview and auto-fill in Video Tube to add videos to your Yogurt profile

If you have other feature requests please be sure to post them in the forums here under Module Requests or post them in the forums at <http://www.customvirtualdesigns.com>
