

WebShow Version 0.65 Released - Modules

NEWS\_PDF\_AUTHOR: tcnet

NEWS\_PDF\_DATE: 2008/10/3 18:30:00

The [WebShow module](#) for the XOOPS content management system combines a media directory with Jeroen Wijering's JW Media Player to catalog and play Flash media files, directories and webfeeds. WebShow is also a web feed generator that will read and filter a media directory, generate an XSPF playlist and publish a web feed link.

[Jeroen Wijering's JW Media Player](#) is under the enclosed Non-Profit Share-A-Like Creative Commons License. Commercial users will need to get a commercial license from Jeroen at <http://www.jeroenwijering.com/?order=form>

### **New Features for WebShow v.65**

- Now Compatible with XOOPS 2.3 and XOOPS 2.0.18
- Using JW MEDIA PLAYER 3.16
- Media Player now displayed on every page.
- Search Function on every page and in the player
- New download functions courtesy of Ivan at sedisoft.com.br
- Fetch, resize and save logo images.
- Security improvements recommended by Trabis
- Many bug fixes. Please see the [Change Log](#) for more info.

Please follow the install or upgrade instructions contained in the archive and available on line in the [WebShow Help Docs](#).

### **WebShow Support**
