

Global domain whois query using browser address bar - YAXS

NEWS_PDF_AUTHOR: sevak

NEWS_PDF_DATE: 2008/10/30 17:00:00

I have used Netquery module and .htaccess to facilitate global whois of domains using browser address bar.

example: find whois query of xoops.org

type: <http://4321.in/xoops.org>

find whois query of google.co.in

type: <http://4321.in/google.co.in>

I hope you will find its useful. Website address is <http://4321.in>

thanks

anjan
