

ShoutBox v4.04 Release By CVD - Modules

NEWS\_PDF\_AUTHOR: tank1955

NEWS\_PDF\_DATE: 2008/11/27 16:10:00

Shoutbox is an XOOPS module that provides an interactive block and pop-up window for visitors to post and view messages. This release addresses most of the feature requests and bug reports we have received.

Features in this release include the addition of selectable guest avatars in preferences. You can also replace the avatars supplied with your own gif's if desired. Word censoring support has been added which ties directly to Word Censor Options system preferences. Refresh issues have all been resolved. Full page refresh only occurs when an incorrect captcha confirmation code entry is detected OR when Frameworks captcha class is selected. An additional option now appears in the popup window console that allows to visitor to enable/disable the Sound On New Message feature. Several minor defects were cleaned up which were causing notices to appear in the debug mode.

For download check the module repository under Communications or go to [CVD ShoutBox v4.04 Download](#)
