

"Video by User" Module - Modules

NEWS\_PDF\_AUTHOR: Mamba

NEWS\_PDF\_DATE: 2008/11/29 17:30:00

[timgno](#) has announced a new module "Video by User" focused on YouTube videos.

The main feature is that you can update automatically YouTube videos from the YouTube user account, and thus keep track of the latest entries of your favorite friends, TV programs, or events. Instead of going to YouTube and check each user individually, you can update to the their latest videos directly from your XOOPS Website.

Another advantage over other similar modules is that "VideoByUser" does not store the info in a database and therefore occupies very little disk space.
