

VideoTube v1.84 Now Available From CVD - Modules

NEWS\_PDF\_AUTHOR: tank1955

NEWS\_PDF\_DATE: 2009/1/17 23:10:00

Video Tube v1.84 is an XOOPS module providing the ability to search, embed and manage videos on your site. Search, preview and auto-fill submission offered for YouTube, DailyMotion, MetaCafe and blip.tv plus a manual submission form for all other video services that offer video embedding.

This is a beta release intended to address some of the feature requests we have received. Release contains 3 bug fixes and 6 new features/enhancements. French translation language files have been added. Video reporting and recommend video are among the new features.

- Bug fix remove mouse position coordinates display at bottom of Video Preview window
- Bug fix add language support to videohelp.php file
- Bug fix typo in javascript code causing Back button not to work in Search YouTube display results screens
- Remove the annoying "minimum of 2 videos required" message
- Add ability to display a single video
- Add "Please Select A Category" display message when no videos can be found in the current category
- Add "No Videos Found" display message when no videos can be found and categories are not enabled
- Change the category video count so the value displayed includes all videos in all associated subcategories when Category Display Type = Advanced
- Eliminate "Main Video View" and "Category Video View" headings appearing near top of video display screen when Category Display Type = Basic
- Add french language files
- Add "Report Video" feature
- Add "Recommend Video" feature

This release is available for download at [CVD VideoTube v1.84 Download](#)
