

## Netquery v4.14 Release - Modules

NEWS\_PDF\_AUTHOR: RVirtue

NEWS\_PDF\_DATE: 2009/2/8 17:10:00

Version 4.14 of Netquery, the complete PHP/SQL open-source toolkit of network utilities, is now available for download here and on the author's web site at <http://www.virtech.org/tools/>

Netquery's major features currently include the following:

- access monitoring & log management,
- spambot "bad behavior" screening,
- geolIP & top countries usage mapping,
- multidomain & IP/AS whois lookups,
- autodiscovery for whois TLD server,
- DNS and Dig (ANY, SOA, NS, MX) queries,
- email address format & MX validation,
- port check with services lookup option,
- HTTP HEAD and GET requests,
- ICMP pings (local and/or remote),
- traceroutes (local and/or remote),
- looking glass router interrogation,
- updateable geolIP & ports data paks,
- user inputs with admin notice & approval,
- multi-instance sideblocks in CMS editions,
- admin selectable CSS stylesheet options,
- full W3C XHTML 1.1 & CSS compliance.

The current release (v4.14) updates Netquery's access monitoring and spambot screener functions based on Maxmind's February 2009 GeolIP and version 2.0.26 of Bad Behavior. It is fully compatible with the latest Xoops release (v2.3.2b) and the Netquery demo test site is running under that Xoops version.
