

PHP 4.3.0pre1 Released - News

NEWS_PDF_AUTHOR: w4z004

NEWS_PDF_DATE: 2002/10/12 21:24:54

PHP 4.3.0 incorporates a very large number of changes, new features, and bugfixes and thus requires extensive testing. This preliminary release is meant to kick-start this testing while the fixes are still being performed

With 4.3, php's integration with Apache 2.* is finally beginning to come together. If you don't need mod_perl, 4.3's final release will be the first opportunity to run a stable dynamic-content site using Apache 2, on Windows 2000 or a Posix system.
