Hey community,

I'm trying out some new stuff for my themes. I made one with a font resize for your users, the xoops user Ritchie from here was asking me about this option.

But before I will make this theme stable, I need some beta tester.

So if you're interested into testing this new feature for Xoops themes, check it out

Please take some time of your day and test it for the community. If you will find errors, tell me please what browser you're using!

Thanks a million
